CODE

1) DEFINING THE QUESTION :

The first step in any data analysis process is to define your objective. In data analytics **jargon**, this is sometimes called the ‘problem statement’. The problem at hand is to develop an efficient and accurate warranty claim fraud detection system.

2) COLLECTING THE DATA:

Pandas - Helps to create a dataset and it is also a library in python.

Pandas Package – It’s a group of Panel Data’s which are used to analyze the labelled data and relational data.

Series – A series is a method of pandas and labelled data. Series are nothing but columns in Excel sheet.

CREATING SERIES-

```
import numpy as np
import pandas as pd
import matplotlib.pyplot as plt
df=pd.read_excel('dsdbx.xlsx')# reading the data
print(df)
```

SUMMARY

In this project, we aimed to develop a DATA ANALYTICS USING PYTHON, with a focus on data techniques which are implemented in Python.

Data Analytics is used in a large data sets to extract the informative data, and analysing the data with plots, graphs and other techniques.

Benefits:

- Improved data techniques, which can lead to understand the data easily.
- Data analytics techniques enable a business to take raw data and uncover patterns to extract valuable insights..
- Enhanced customer trust and satisfaction by reducing fraudulent claims.
- Data-driven decision-making for warranty claim management.
